SIL FFS03

To: FreeFlight Systems (Trimble) Dealers, Service Centers and Customers

From: FreeFlight Systems Customer Service

Subject: FreeFlight (Trimble) NavData Services to be Discontinued for all "PLUS" Navigation Systems

FreeFlight Systems has been notified by Jeppesen that NavData services for the GPS navigation systems listed below will be discontinued as of cycle 0906 (Effective Date: June 4, 2009).

- **FreeFlight / Trimble 2101 Approach Plus (p/n 81439-XX, where XX = 02, 03 or 12)**
- **FreeFlight / Trimble 2101 I/O Approach Plus (p/n 81440-XX, where XX = 02, 03, 12, 32, 33 or 42)**
- **TNL 2000 Approach Plus (p/n 81438-02)**

This was a difficult but necessary decision because FreeFlight and Jeppesen have exhausted all alternatives for producing databases that will fit on the required edge cards. These units are engineered to accept 2 MB data cards, and the Jeppesen databases are exceeding these limits due to normal growth of aviation data.

For the owners and operators of the above 2101 Approach Systems, an upgrade to allow the use of a 4 MB data card is being developed and will be available in August of 2008. The upgrade will consist of a hardware modification, software upgrade and a new 4 MB datacard.

The newer FreeFlight 2101 I/O Approach Plus models ending in suffixes -32, -33 or -42, with MOD 14 marked out, have already received the hardware modification and may be updated in the field.

FreeFlight Systems is currently investigating the possibility of including the TNL 2000 Approach Plus in this upgrade.

Please contact FreeFlight Support for additional information.
